Team ID	SWTID-2026-1297
Project Name	AI FAQ Assistant API
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/24bsccs19-web/AI_FAQ_Assistant_API.git
Programming Language(s)	JavaScript (Node.js)
Framework(s) Used	Express.js
Key Features Implemented	User registration and login, JWT authentication, FAQ creation and management, FAQ search, AI-powered

	answer/FAQ generation using Google Gemini, MongoDB database integration, validation and error handling.
Pending / Incomplete Features	No major features pending.

Setup / Run Instructions

1. Clone the GitHub repository.
2. Install Node.js and MongoDB.
3. Run: npm install
4. Create a .env file with the required environment variables.
5. Start the server using: npm run dev
6. The API runs on the configured localhost port.
7. Use Postman to test the API endpoints.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The AI FAQ Assistant API is developed using Node.js, Express.js and MongoDB. The application provides authentication, FAQ management, FAQ search and AI-powered response generation. The code is organized into controllers, routes, models, middleware, services and utility modules for maintainability and reusability.
